Molecular MS Diagnostics is now celebratating it's SECOND Anniversary!

Cranston RI: Molecular MS Diagnostics LLC, based in Cranston, Rhode Island is poised to celebrate its second anniversary. Providing sample analysis services to the pharmaceutical industry, and with more than sixteen years of expertise, Dr. Daniel Magiera brings not only a wealth of experience, but his business, Molecular MS Diagnostics (MMSD), fulfilling a much needed gap in the market providing analytical services where ever needed from New England to all throughout the United States.

Combining highly trained scientists and state of the art analyzing and diagnostic equipment, the team of scientist's at MMSD have the capabilities to turn around volume batch sampling in the analytical arena of bio-analytical testing such as plasma and urine analysis for generic drugs and analytical services related to dissolution testing, assay and impurity HPLC (High Pressure Liquid Chromatography) testing for drug substance and drug products. Dr. Daniel Magiera recently added a Control Substance License (class II-V) to broaden MMSD's testing capabilities. Additional to its core services, MMSD incorporates a research and development element that allows clients to specify its needs-based analysis requirements, providing client added value service.

MMSD just issued a Government Access Website (www.govtesting.com) this March 2009, expanding their successful growing business working with government agencies that are in need of a cost effective full service analytical, bio-analytical laboratory where reliability and client confidentiality is paramount.
